

## The new way to record waste transfers

### FCC Environment commits to electronic waste management with edoc

Leading waste and resource management firm, FCC Environment is now one of 1,500 businesses across the UK to have registered to use edoc since it launched in January this year.

The company, recently named as the fifth largest waste firm in the UK in 2013-2014, registered for edoc soon after the launch and has since begun to make the new system available to its customers.

Chris Griffiths, Technical Support Manager at FCC Environment said: "The previous system was based on regulations which were introduced and written more than two decades ago, therefore as a company we recognise the value that a modern system for managing the transfer of waste between organisations would bring.

### edoc is back at RWM 2014

edoc is holding a seminar during RWM this year on Wednesday 17th September from 12.15pm. Chris Deed, edoc Programme Manager at the Environment Agency, will introduce delegates to edoc in action and explain how it can help businesses to comply with their legal duty of care.

Chris will explain how edoc can offer a simple and efficient electronic solution to the traditional paper-based waste transfer note system, with the benefit of saving businesses both time and money. Chris will also share experiences of some of the businesses who have already registered to use the free system.

For more information on how edoc will be showcased at RWM 2014 click [here](#).

### Myths about edoc: have you heard them?

Nine months on from its launch edoc is receiving positive comments. Though as expected with any new system some misconceptions have emerged and the edoc team at the Environment Agency want to help you understand what you need to know about edoc.

Victoria Vaughan-Williams from the edoc team at the Environment Agency said "We continue to receive positive feedback about how straightforward the edoc system is to use. Having attended a number of recent industry events we're also finding we are regularly being asked the same questions. There are some misconceptions out there about how the system works. We want to dispel these myths, and highlight just how simple and effective edoc really is and how it can benefit businesses across the UK."

### Are you using edoc yet?

We've designed edoc to be intuitive and simple to use but why not take a look at resources available online to help you get started.

If you are a producer of waste, contact your contractor and see if they are using edoc, indicate your wish to use edoc and encourage them to transfer on-line.

Simply visit [www.edoconline.co.uk](http://www.edoconline.co.uk) to find out more and to register your business now.
